

Frictionless AI-Web Execution Layer - Let AI See, Interpret, and Act.

SelaNet.ai

SelaNet makes this possible.

Als can extract data from websites that do not provide APIs.

- An AI agent that finds sites with the most popular adult videos, curates the top daily uploads, and presents them.

Access sites where APIs are prohibitively expensive or completely blocked.

- X (Twitter): An AI agent that analyzes all tweet data related to Nasdaq-listed companies and provides investment signals.
- Chinese SNS: Xiaohongshu (Detect in advance which company's products—such as cosmetics, dolls, or merchandise—are trending).
- LinkedIn: An AI agent that finds CTOs with a specific career history and a strong interest in a particular field

Video analysis and comment monitoring are possible.

- An AI agent that monitors data to track mentions and public opinion about specific individuals and sends alerts.

Real-time product search and even payment processing become possible.

- An AI agent that searches for the cheapest price on a specific model every minute and completes the purchase.

More incredible, "off-the-record" capabilities can be explained in person.

AI Agent for Every Task: Explosion Started

A new digital workforce is emerging across **every vertical**, set to redefine the global economy.

Data & Research Agent

- Market & Competitor Intelligence
- E-commerce Price & Inventory Tracking
- Financial & Alternative Data Aggregation

High-Reasoning Agent

- Legal Contract Analysis
- Due Diligence
- Investment Research & Modeling
- Code Generation & Debugging

CS/Transactional Agent

- E-commerce Orders Refund Processing
- Appointment & Reservation management
- Customer Support & Issue Resolution

Workflow Automation Agent

- Business Lead Creating
- Logistics & Supply Chain Automation
- Insurance Claims Processing
- Vendor & Partner

A POPULATION BOOM

The Agentic Web's Unprecedented Scale

1.3 Billion+

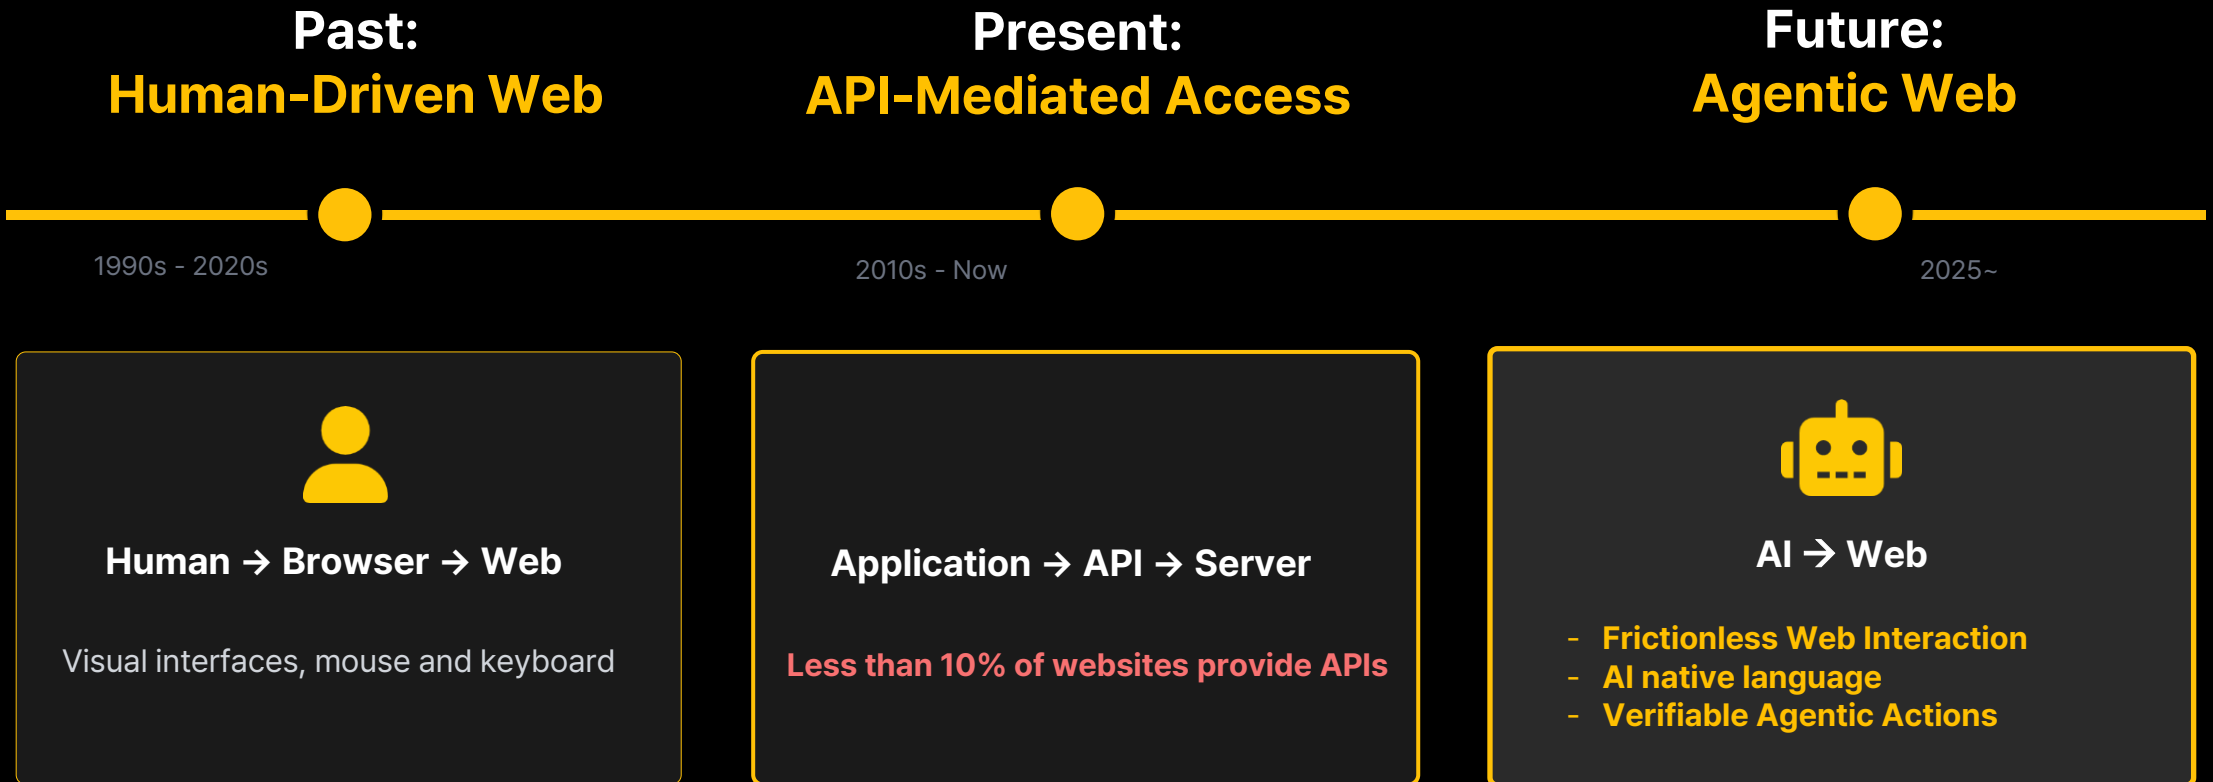

AI Agents by 2028 (vs. millions in 2025)

Source: Microsoft

\$220 Billion+

AI Agent Market by 2034

The Web Access Stack Is Evolving for AI Agent

Consolidated web execution layer is necessary for AI agents

Target Market: AI Agent Web Execution

Web access is **one of the largest cost drivers** for AI agentic workloads.

Task Automation

SaaS + low web dependence

LLM Cost: 5-10 %
Web Interaction Cost: 2-5 %

Simple tasks; low-cost models + caching; highest margin

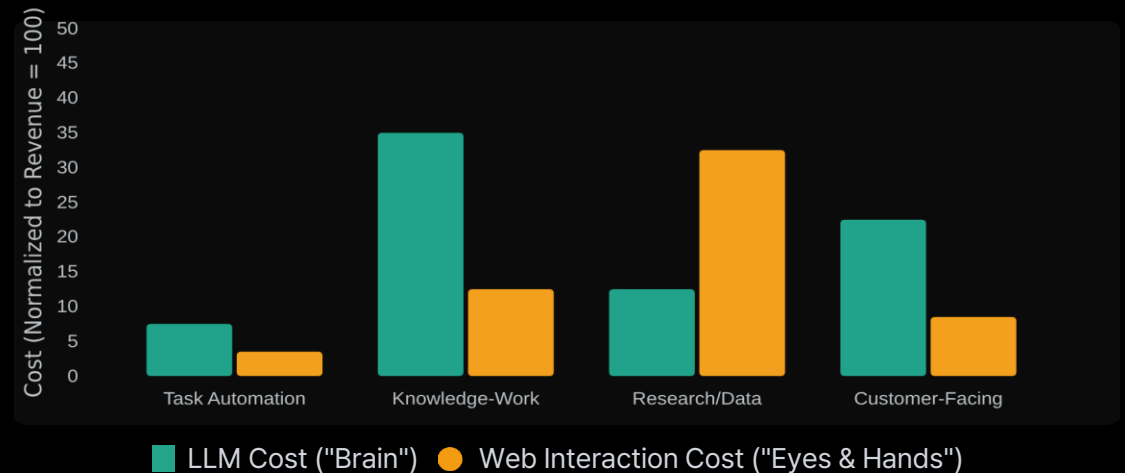

Knowledge-Work

Legal / coding / analysis

LLM Cost: 30-40 %
Web Interaction Cost: 10-15 %

Long reasoning + verification loops drive heavy token usage

Cost Structure

Research/Data

Structurally high web costs

LLM Cost: 10-15 %
Web Interaction Cost: 25-40 %

Parallel browsing, anti-bot friction, retries make web infrastructure the bottleneck

Customer-Facing

CS / sales / booking / payments

LLM Cost: 15-30 %
Web Interaction Cost: 5-12 %

High conversational volume, context management, tool calls

SelaNet Targeting AI Agents

From Sela's perspective, the highest-priority targets are **Research/Data** and **Customer-Facing/Transactional**, especially the teams whose workflows have heavy browser-based execution dependence (post-login access, dynamic UIs, multi-step actions, and high reliability requirements).

* % out of agent revenue

Problems - Why AI Agents Fail on the Real Web

AI agents access the web unlike human but like bots — and that breaks at scale.

Web Blocks AI Traffic

Parallel, repetitive agent requests

→ Trigger **bans** and CAPTCHAs

→ **Cost explode with scale**

Ex. OpenAI's GPTBot and Anthropic's ClaudeBot are frequently blocked

Post-Login Blindness

Agents cannot reliably navigate browse, read, act on data behind **user authentication** which is most valuable.

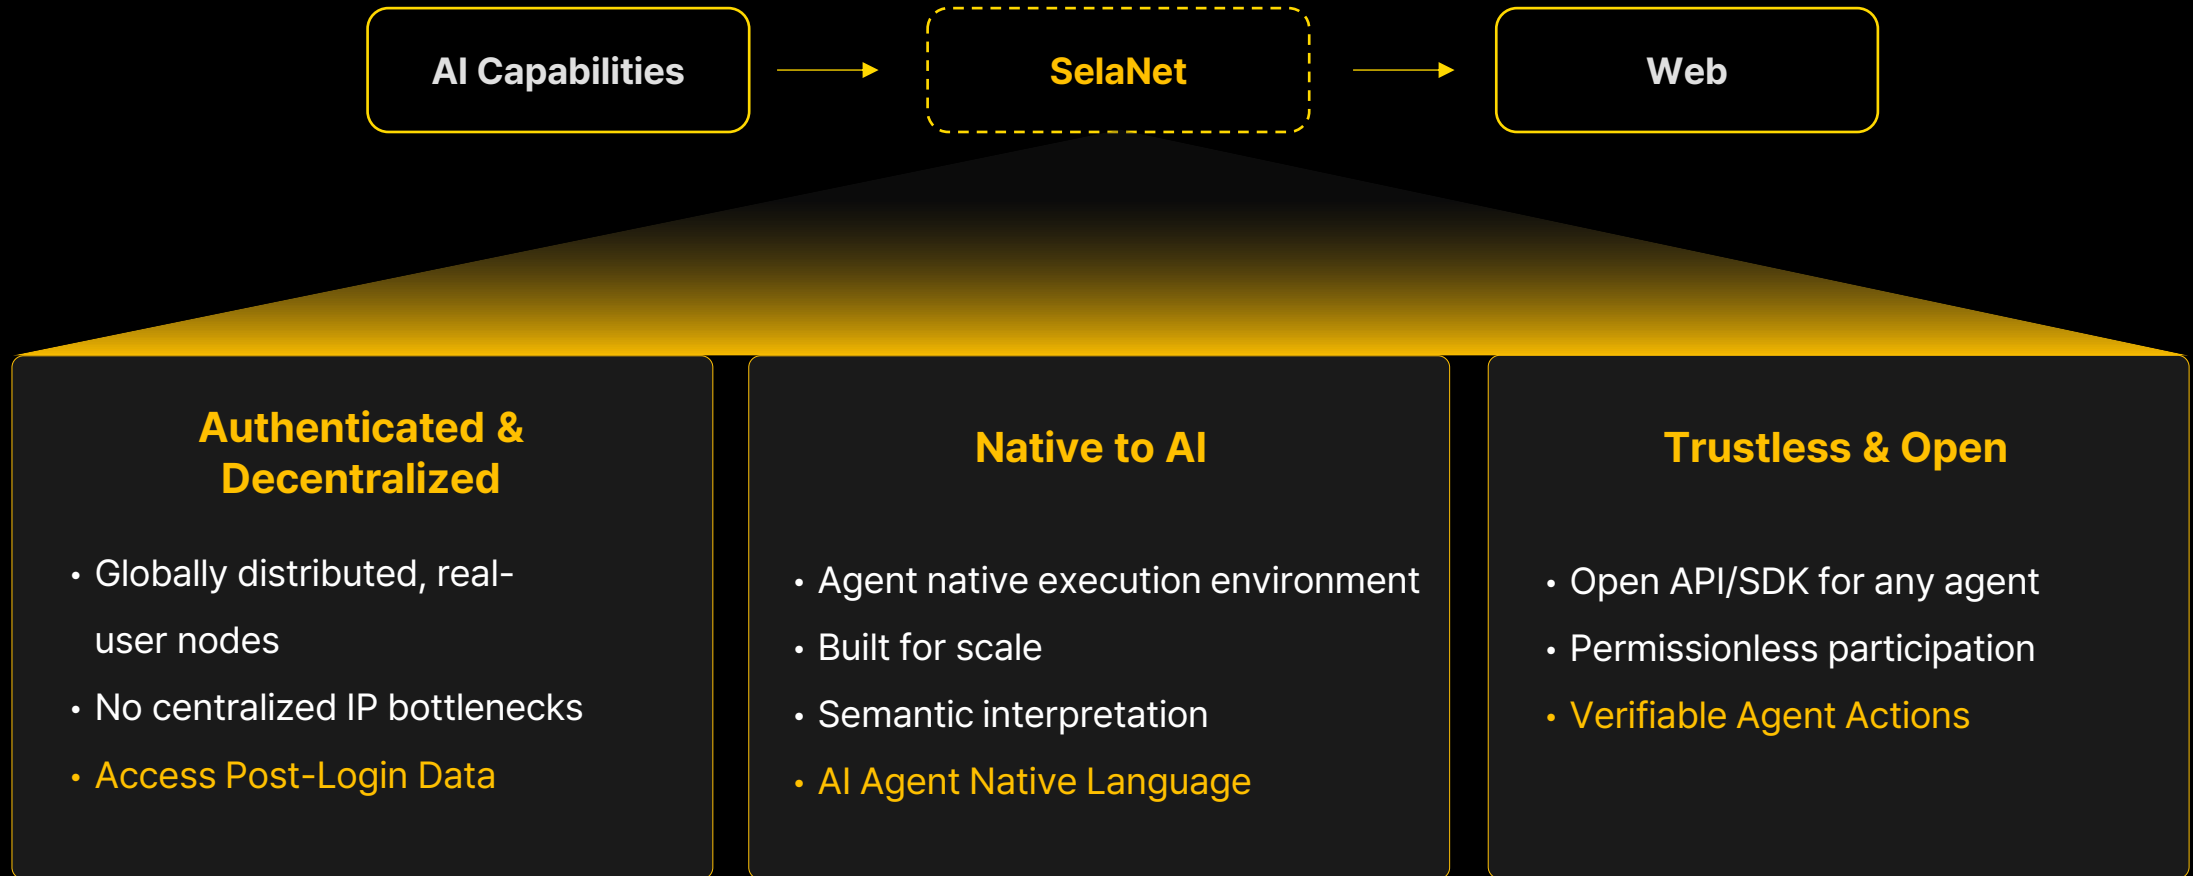

Reliability Collapses

Broken workflows, automation is fragile, **breaks easily**

→ Data quality issues, incorrect context processing

The internet is ready for AI but the web access stack is not.

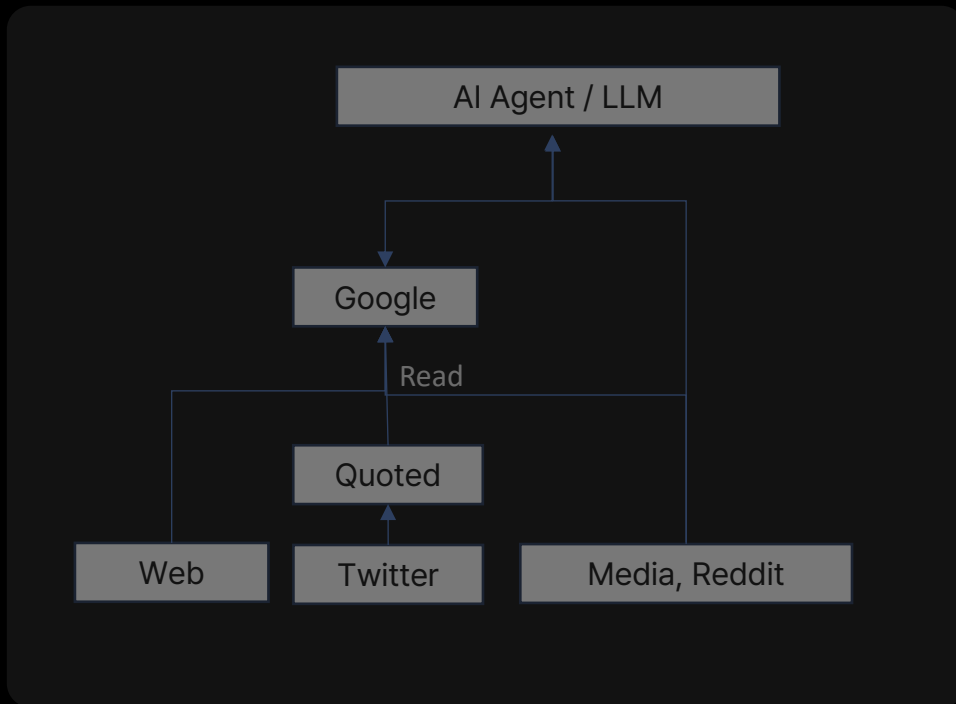

Solution - Rebuilding web access, for AI agents

SelaNet is a unified web execution protocol

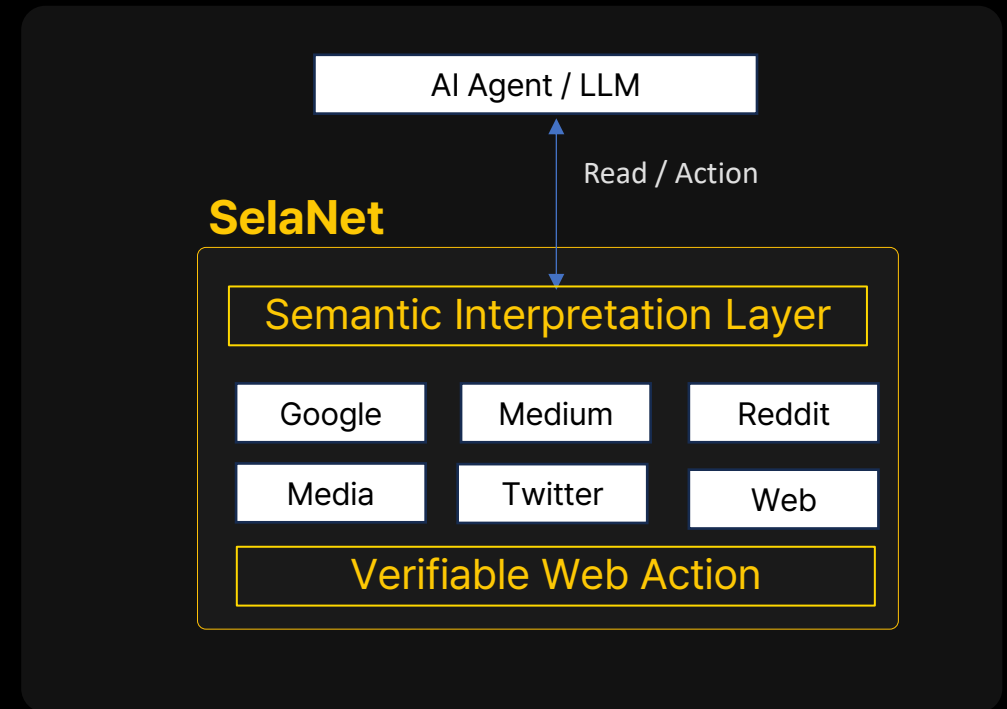

AI agents era needs standardized protocol for frictionless web access.

Without SelaNet

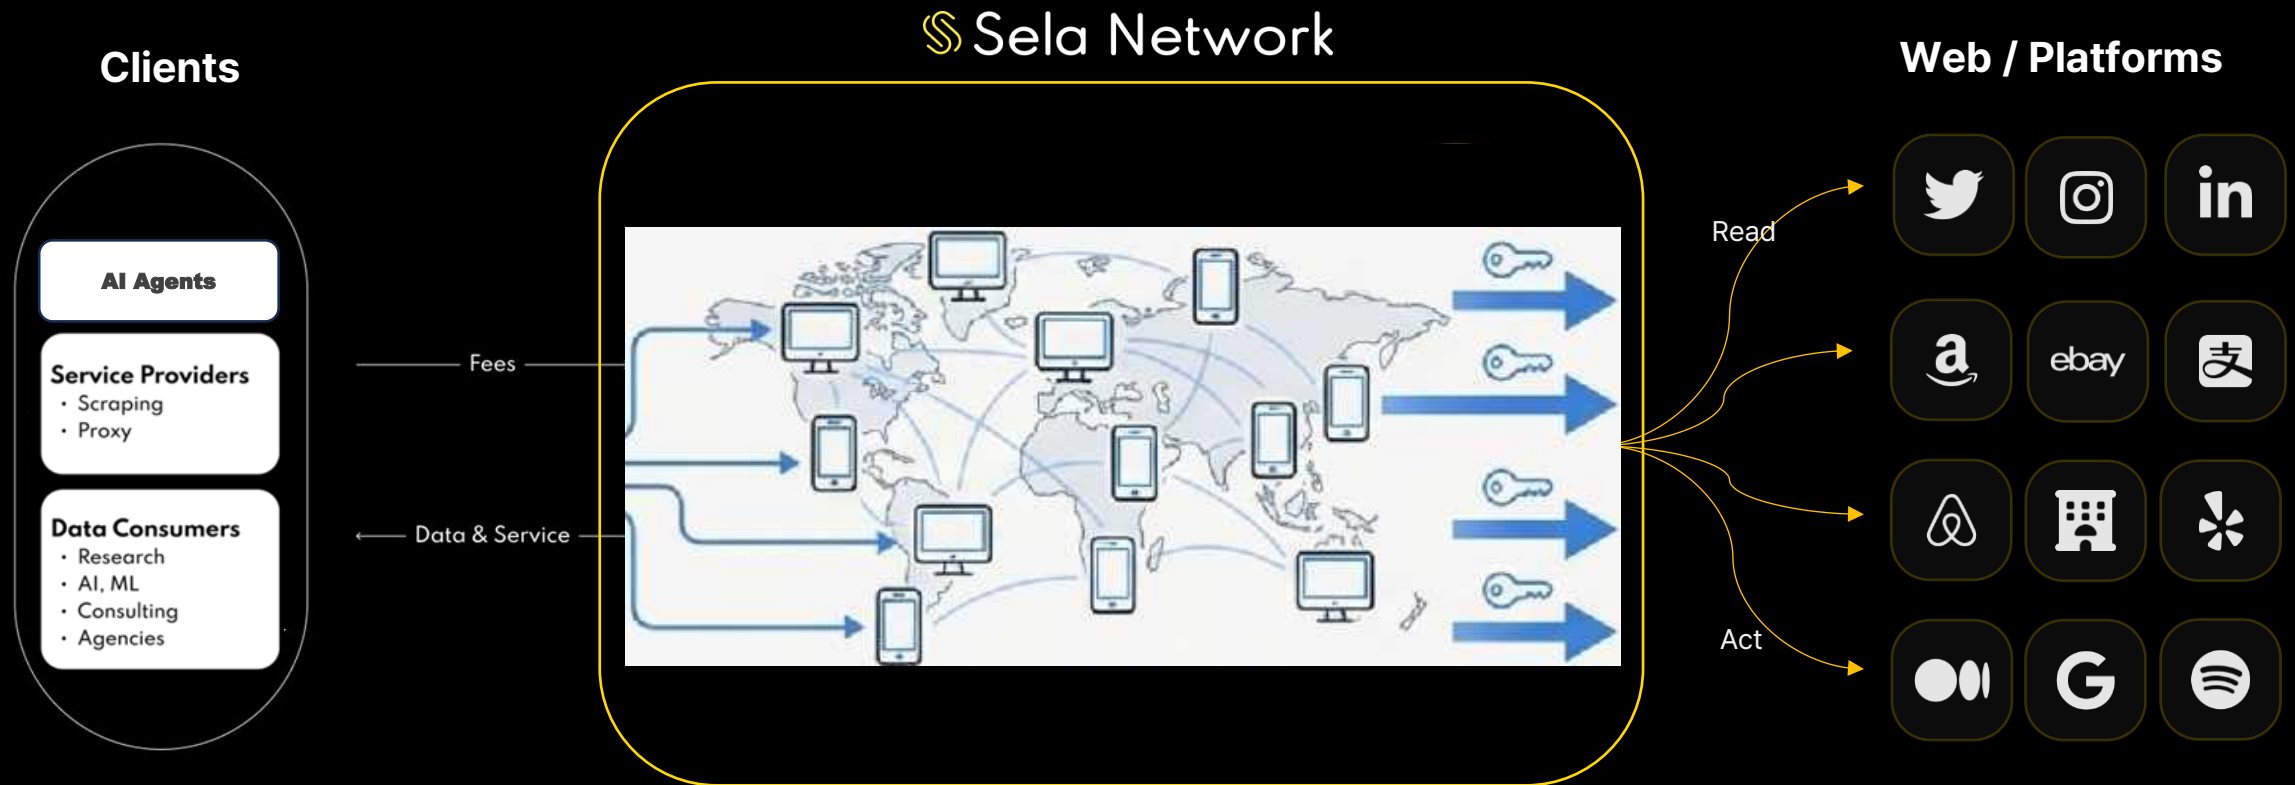

VS

With SelaNet

Human-like Web Access via Distributed Nodes

AI agents can **see**, **understand**, and **act** on the web through SelaNet

Sela Nodes – Distributed Browser Nodes Network

Sela Nodes function as **authenticated browser and data pipelines**, enabling safe and unrestricted access to the web.

**Authenticated
Accounts**

Devices

Internet/IP

Core Benefits

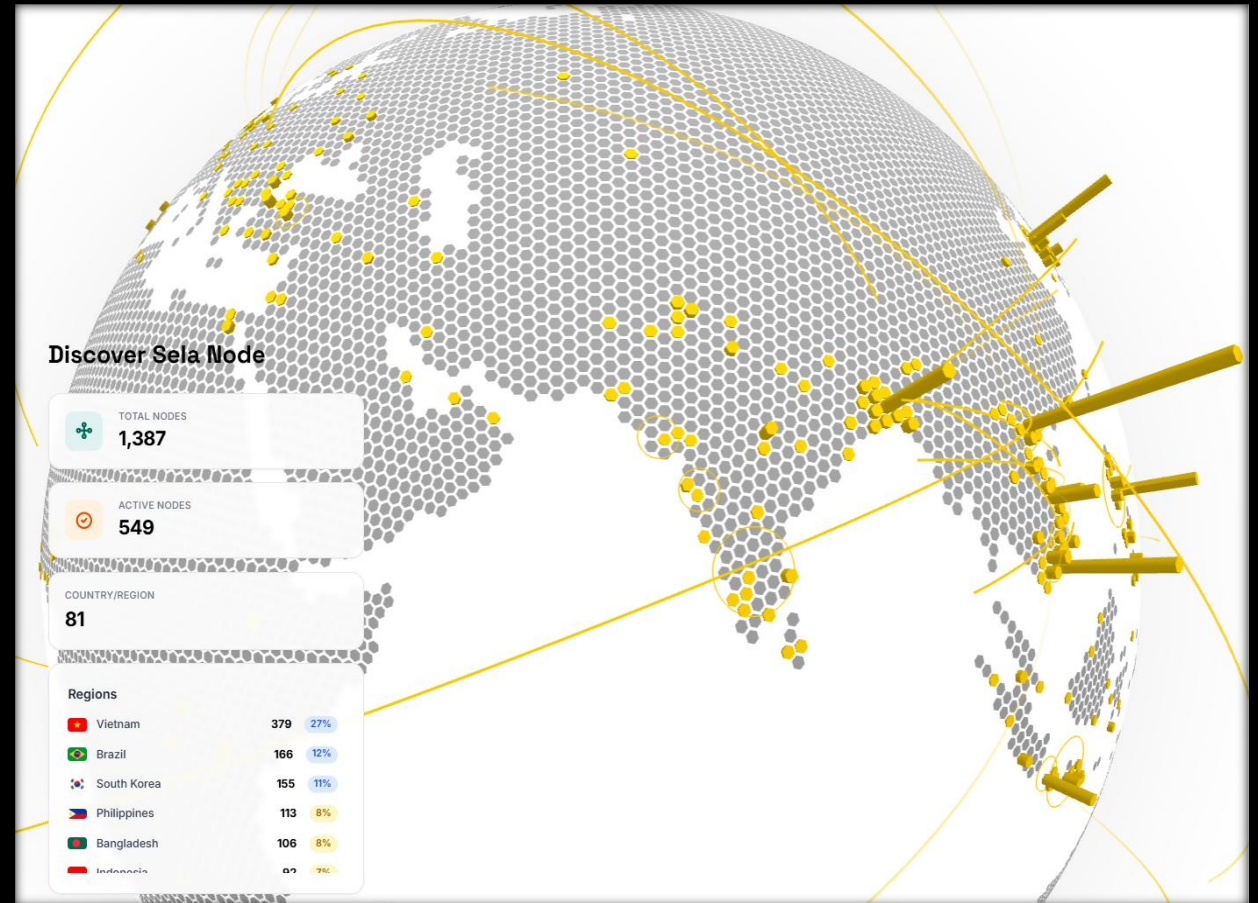

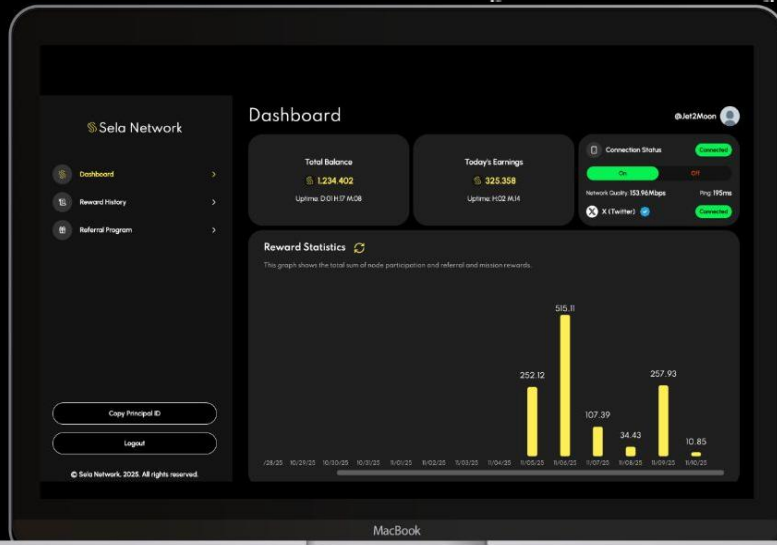

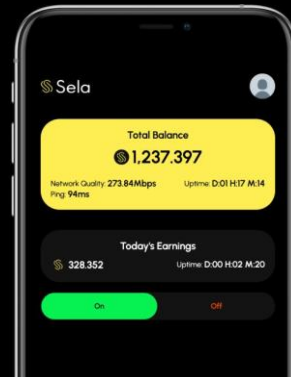

- **Private Data:** Hidden behind platform logins
- **Web Coverage:** All web should be accessible
- **Human like execution:** Bypass through real browser
- **Near Real Time:** AI agents need the most recent data
- **Verifiable Actions:** cryptographic proof on-chain
- **Lower cost:** Distributed Capex

Sela Nodes – Distributed Browser Node Network

Nodes are the fuels that powers the network

Sela Node Reward

- Uptime
- Web Interaction
- Referral

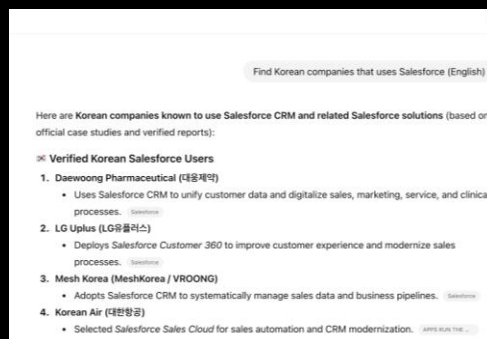

How Sela can change for Biz Lead Generation AI

– Same Question, but Different Result

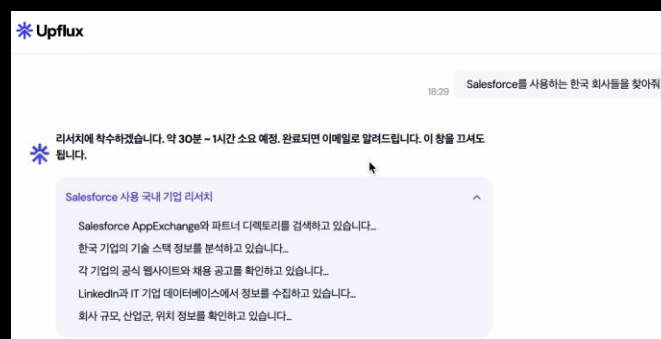

Prompt : Find Korean companies that uses Salesforce

ChatGPT

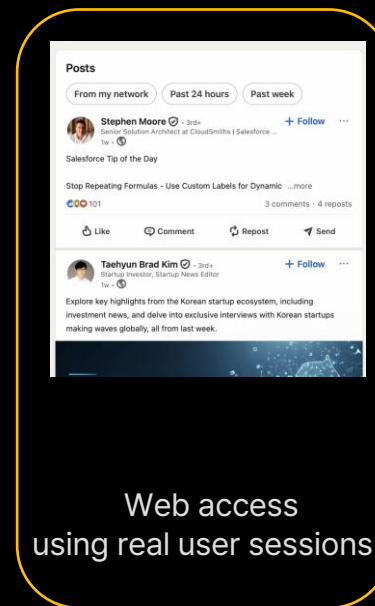

- Stops at login walls
- Blocked by CAPTCHAs
- Unstable session, shallow data

Upflux (Powered by SelaNet)

AI reasoning Layer
(Planning & decision-making)

Web access
using real user sessions

Verified Leads, enriched from real,
authenticated data

AI can answer questions. Sela lets agents execute behind login walls

Competitive Landscape

Others sell tools or access. Sela builds the infrastructure layer AI depends on.

* Tavily : '25 Seed \$25m

* Browserbase: '25 Series-B \$40m @ \$300m valuation

* Browser Use: '25 Seed \$17m

Developer Tools (Playwright):

→ Don't scale parallel AI workloads

Centralized APIs (Tavily, Browserbase)

→ Centralized, failing at high scale workflows

Proxy/Bandwidth Network (Bright, Grass)

→ Not designed for agent native execution

Flywheel

A self-sustaining economy where contributors earn, clients succeed, and a virtuous cycle drives exponential expansion.

1. More Nodes Join

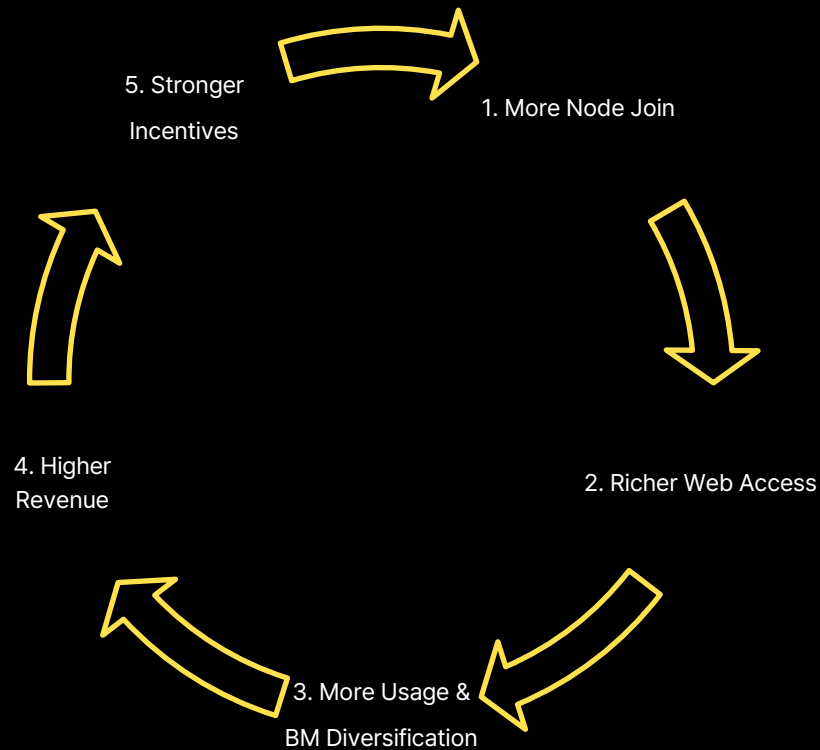

- Earn point rewards

2. Richer Web Access

- Broader and more reliable interaction

3. BM Diversification

- Demand and TXs increase
- More use cases leads better AEO
- (Answer Engine Optimization)

4. Higher Revenue

- Ecosystem development
- Token burn

5. Stronger Incentives

- Incentivize nodes
- Ecosystem grows

GTM Strategy: Win Long-tail to be the Standard

Making **SelaNet** the easiest, fastest, and most reliable way for a builder to give their AI agent web powers.

GTM Strategy: Powering the Agentic Economy

Segment 1

Reference & Proof

Small/Mid-size Agent Startups

Target: AI agent-native startups

Pain: Hard to differentiate. “Differentiator” is value

- Post-login web access
- Dynamic UI issues
- Session instability

Packaging

Partnership with flexible price tiers + SLA

Segment 2

Long-tail Growth

Agent Builders (Verticals)

Target: Vertical SI firms, agencies, indie builders

Pain: Complex web environments, “FAST” is value

- Builder friendly environment (SDK + Docs + Free tier)
- Realtime web access
- Post-login web access

Three-pronged Strategy

SI partners, Builder community & Joint Hackathon, PLG

Segment 3

Partnership Growth

Platform Partnerships

Target: Agent Creation & Automation Workflow Platforms
Agent Marketplaces

Value: “execution quality”, “Seamless Connecting”

- Post-login web access
- Human-Like execution
- Reduced blocking

Co-marketing & Seamless Connectors

Co-run hackathons and template sprints to seed adoption

Success Metrics

Reference Startups:

- Reference logos, POC→ paid conversion
- Success rate/retry rate

Vertical AI Builders:

- Developer activation
- Weekly active builders

Platform Partners:

- Connector installs
- Revenue shares

B2B and AI Agent builders focused growth

Roadmap 2026-2030

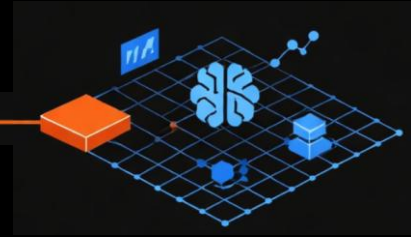

Infrastructure Foundation

- Nodes: 1,000,000
- IP: 150 countries
- Dedicated Node Device
- SDK/API for AI agents
- Reference Building

Business Expansion

- Diversified Web/Platforms Access
- Diversified Vertical AI Agents
- Massive Growth through Partnership
- Agent dev ecosystem and community

Agentic Web Protocol

- Frictionless Agentic Web for AIs
- Power AGI Economy
- Market leadership as vertical infrastructure

We are building the **web interaction layer for AI**, the **HTTP/TCP/IP of the AI agent era**.

Token Economics I

\$SELA is the utility token that fuels node participation, sustains the data pipeline, and drives ecosystem alignment.

Rewards

Node operators and **\$SELA** stakers earn **SPWR** for providing bandwidth and computational resources to the network.

Payments

Customers use **\$SELA** to purchase APIs subscriptions, datasets, and features.

Payments can be waived for **\$SELA** stakers

Governance

SPWR Holders vote on system upgrades, fee structures, and policy allocation

Staking Access

Stake **\$SELA** to secure network and validator and earn rewards, or to join subnets to use node network.

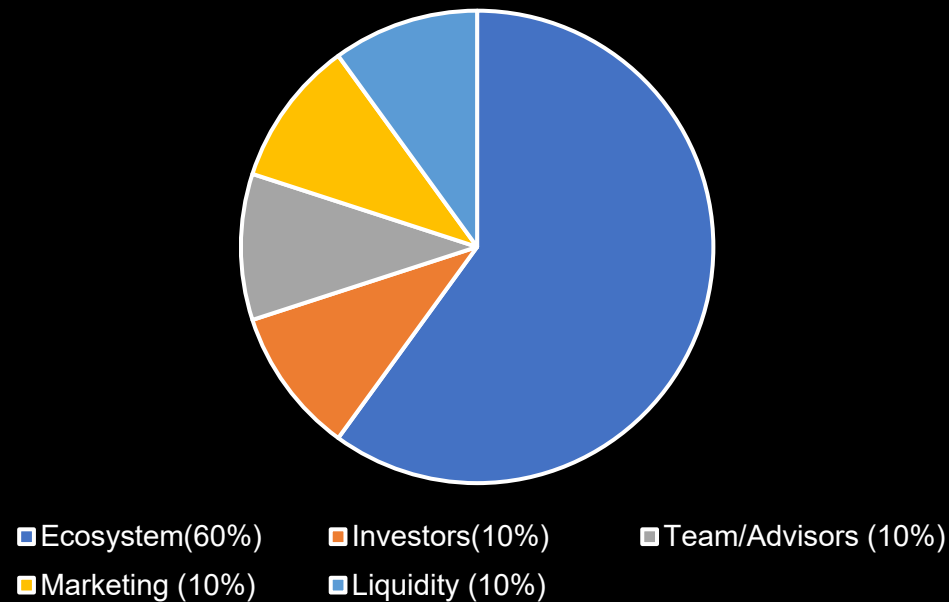

Revenue and Swap Tax (Burn Mechanism)

A portion of revenue and **SPWR** to **\$SELA** swap tax is used for token burns, creating a deflationary effect.

Token Economics II

Structured for long-term sustainability across community, team, investors, and governance

\$SELA Allocation

Key Distribution Points

Fixed supply - 1,000,000,000 SELA

Ecosystem : Designed to grow adoption. Reward node operators, early participants, and user incentives

Community : Managed by the protocol for long-term funding, operations, or emergency interventions

Investors : Reserved for the founding team with vesting

Team/Advisors : Allocated to early investors and strategic advisors. Subject to lockup and vesting

Marketing : Supports awareness, partnerships, and ecosystem campaigns to drive adoption

Liquidity : Ensures exchange availability for smooth market operations

Investment Opportunity

SAFE (Simple Agreement for Future Equity) or SAFT

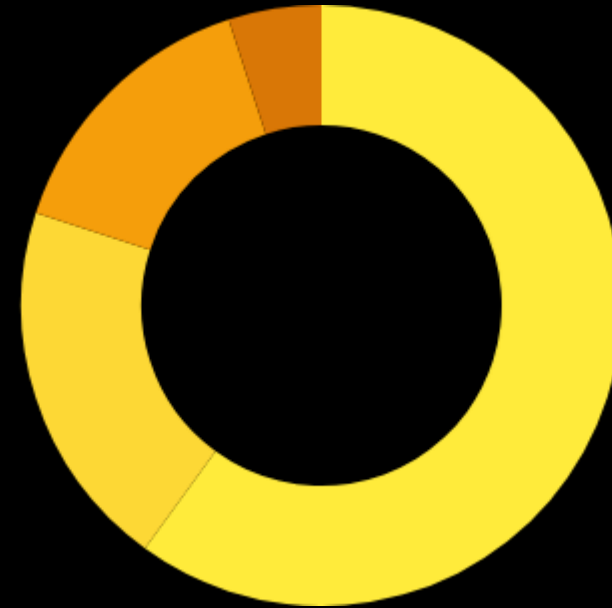

Current Round

\$1M @ \$20M FDV

Investment Thesis

Scale network infrastructure - expanding nodes, data partners, and AI agent integrations across ecosystems

● Engineering & Node Infra	60%
● Ecosystem & Agent Integrations	20%
● Business Development & Partnerships	15%
● Legal & Compliance	5%

AI-Web Interaction Layer at Scale

Focusing on agent integrations and global node expansion

tw@selanet.ai

Private Data Is Valuable

The public web is filled with polluted data, private data is harder to access, and AI training is becoming less efficient.

Scarcity & Critical

The most critical data layer for AI, research, and financial systems

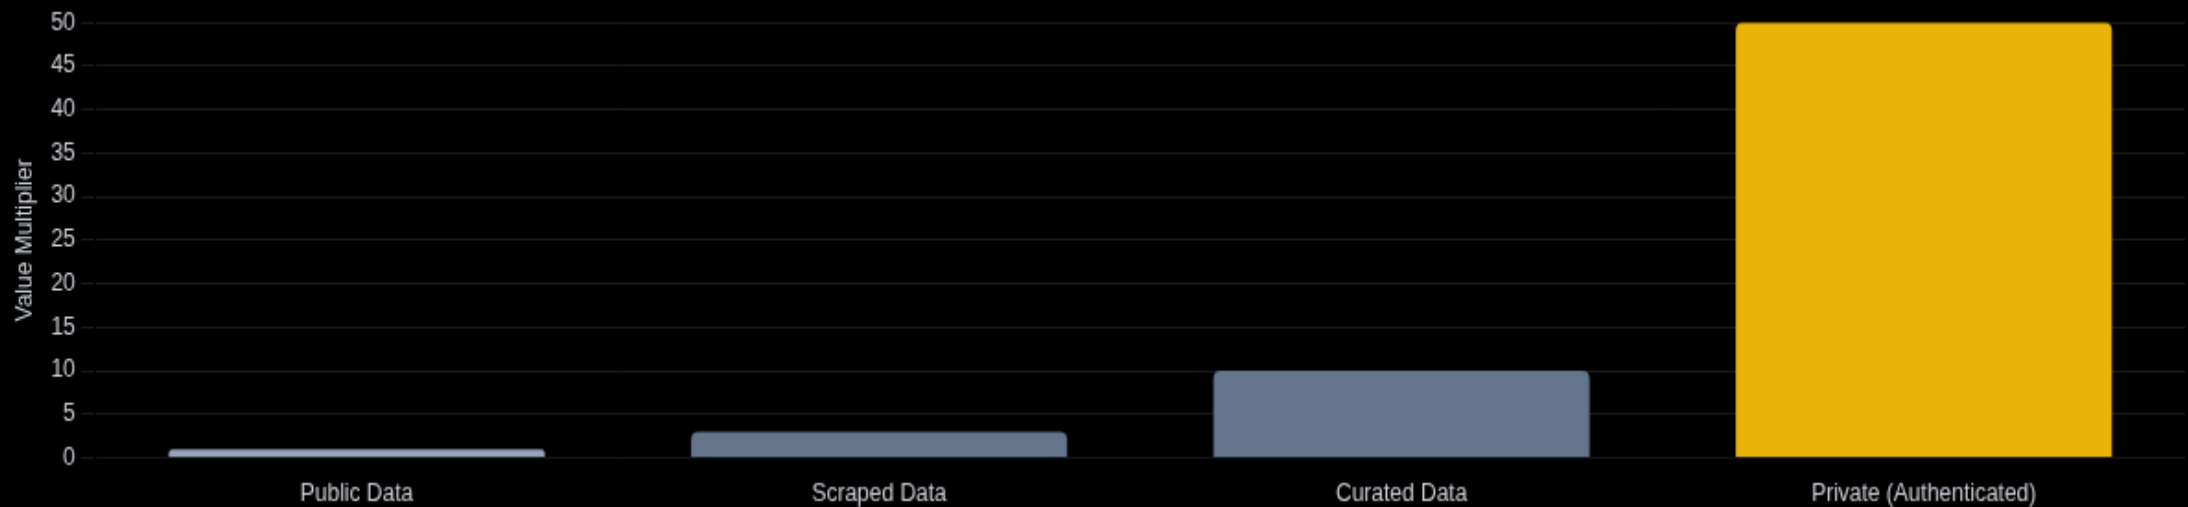

Value

10–100x higher value vs public datasets

Demand

Delivering actionable insights based on real human behavior

Data Value Comparison (Relative Value Index: Public = 1x)

Addressable Market Segmentation

We target agent-first companies, then expand to scalable platforms that serve downstream B2B clients.

Segment 3

Scalable infrastructure or marketplace to service their thousands of downstream enterprise clients

Key Clients:

- AI Agent Platforms & Marketplace
- Workflow automation tools Platforms
- Big AI agent companies

Segment 2

Companies adopting AI agents to grow their core business or achieve cost reduction and operational efficiency through automation.

Key Clients:

- Vertical SI firms
- Agent builders
- Enterprise AI teams

Segment 1

Agent-first SMB startups with production workflow failures or differentiation pressure, ready to pay now for post-login access and high-success web actions.

Key Clients:

- Small and Medium AI Agent Startups
- Indie Builders

Peer Group Comparison

SelaNet vs other Data/DePIN Platform Comparison

Features / Companies	SelaNet	Teneo Protocol	Browserbase	skyvern
Primary Role	AI-web execution protocol	Public/social web data layer	Cloud browser-as-a-service	Browser automation platform
Architecture	Decentralized Browser Nodes Network	Decentralized Browser Extension Nodes	Centralized fleet of headless browser instances	Centralized AI browser agent using LLMs + computer vision
Where Session Operated	The browser node network run full browser sessions as requested from AI agent/clients	Inside users' own browsers; sessions are tied to the user's browser context	In Browserbase's cloud	Skyvern Cloud's managed browsers
Accessible Data	Public + Post-login	Public data	Any web page a headless browser can reach	Any website the browser can load
Data Value	High	Low	High	
Verification / trust	Verifiable actions via zk-TLS	-	Logs/traces only	Logs/traces only
Target Clients	Long-tail & mid-market AI agents needing post-login access + actions + proofs	AI/DeFi apps needing real-time public web & social data	Developers needing Large-scale browser session	Ops / back-office / devs who want to automate browser workflows
